Algebra finds patterns between numbers: $a^2 + b^2 = c^2$ $a^2 + b^2 = c^2$ is a famous relationship, describing the sides of a right triangle. Algebra finds entire sets of numbers — if you know a and b , you can find c . Calculus finds patterns between equations: you can see how one equation (circumference = $2\pi r$ circumference = $2\pi r$) relates to a similar one (area = πr^2 area = πr^2).

Yes it would work! A good example is the SIR model (and its alternatives) - it uses calculus within the SL syllabus, and offers lots of opportunities to show personal engagement. The link above is

useful for understanding the model, and also this site explains the model quite nicely. I'm also doing my IA on this but for HL, so if you need any advice, drop a comment!
