Range Rover Synchronisation Guide

I think the code that goes to the BECM has a number/string and

then a number for the key and then the rolling code on the end. From the key number the BECM knows if key 1 or 2. If the rolling code in the BECM doesn't match the one in the key then it need resyncing. That part is in RAVE, I think. New key will just need syncing to BECM. Job done.
