In fact, when a building is too complex, a wind tunnel procedure can be considered. Nevertheless, the code set a standard in determining wind procedure that we require in our design. ASCE 7-10 provides two methods for wind load calculation: a simplified procedure and an analytical procedure. The simplified procedure is for building with a simple diaphragm, roof slope less than 10 degrees, mean roof height less than 30 feet (9 meters), regular shape rigid building, no expansion joints, flat ...
