Copris ochus also has distinct sexual and male dimorphism in head horns. These structures are impressive because of the exaggerated sizes. There is a direct

correlation between male horn lengths and body size and higher access to mates and fitness. In other beetle species, both males and females may have ornamentation such as horns.

Sexual dimorphism - Wikipedia

Since Darwin's time and the publication of *The Different Forms of Flowers on Plants of the Same Species* (1877), there has been continuing interest in understanding the complex but fundamental biological processes of sexual reproduction in general, gender and sexual dimorphism in plants in particular, and why "hermaphrodite plants should ever have been rendered dioecious" (Darwin 1877). Patterns of association between dioecy (separate male and female plants) and ecological traits that ...

sexual dimorphism the presence in a population of two sexes each with a different PHENOTYPE, a classic example of a GENETIC POLYMORPHISM. The underlying mechanism varies in different organisms, but is often controlled by genes on special SEX CHROMOSOMES (see SEX DETERMINATION).

Gender dimorphism | definition of Gender dimorphism by ...

Sexual dimorphism is a term for the phenotypic difference between males and females of the same species. Direct sex differences follow a bimodal distribution. Through the process of meiosis and fertilization (with rare exceptions), each individual is created with zero or one Y-chromosome. The complementary result for the X-chromosome follows, either a double or a single X.

Sex differences in human physiology - Wikipedia

Sexual dimorphism, the differences in appearance between males and females of the same species, such as in colour, shape, size, and structure, that are caused by the inheritance of one or the other sexual pattern in the genetic material. Read More on This Topic sex: Differentiation of the sexes

Gender and Sexual Dimorphism in Flowering Plants eBook ...

Sexual size dimorphism is common among animals; in most species females are on average larger than males. In contrast, male mammals are usually larger on average than females of the same species, and the spotted hyena (*Crocuta crocuta*) may be one of the rare species of mammal in which females are generally larger than males.

Ontogeny of sexual size dimorphism in the spotted hyena ...

Sexual dimorphism. The central subdivision of the bed nucleus of the stria terminalis (BSTc) is sexually dimorphic. On average, the BSTc is twice as large in men as in women and contains twice the number of

somatostatin neurons. Hormone replacement therapy has been shown to influence hypothalamic size.

Stria terminalis - Wikipedia

Gender dimorphism (the presence of two sexual morphs in a population) occurs in only ~10% of angiosperm species but has evolved from cosexual ancestors in nearly half of the angiosperm families,...

Polyploidy and the Evolution of

Gender Dimorphism in ...

Sexual dimorphism then encompasses a huge spectrum. It goes from creatures which are only slightly different between the genders to animals which hardly look like they belong to the same species.

Sexual Dimorphism and Sexual Selection. One force which usually drives sexual dimorphism in evolution is sexual selection. In this form of selection, the interaction between the genders seeking and choosing mates causes differences in the male and female populations.
