A pedigree is a representation of our family tree. It shows how individuals within a family are related to each other. We can also indicate which individuals have a particular trait or genetic condition. If we take a pedigree, which we usually try to include at least three generations, we might be able to determine how a particular trait is inherited.

This worksheet gives students a chance to practice identifying genotypes on pedigree charts. The pedigrees focus on human genetic diseases, such as albinism, cystic fibrosis, tay-sachs, and sickle cell anemia. Some students do struggle with these charts, so I usually practice doing a few with them. If the parents are both heterozygous ($Aa \times Aa$) many students will be confused about the genotype of an offspring who does not have the disease.

A pedigree is a diagram that depicts the biological relationships between an organism and its ancestors. It comes from the French "pied de grue" ("crane's foot") because the branches and lines of a pedigree resemble a thin crane's leg with its branching toes. A pedigree is used for different animals, such as humans, dogs, and horses.

Biology students learn to analyze pedigrees as part of a unit on genetics. Pedigrees are usually learned soon after students have a grasp of Punnett squares and the concept of segregation. Some students will have an easy time with pedigrees, depending on how well they understood genetic crosses. In this activity, students are introduced to the concept of a pedigree of a family and they practice determining the genotypes of family members based on observed recessive phenotypes.

In biology, a pedigree is a diagram showing genetic relationships between members of a family. It is used to analyze patterns of inheritance for specific genetic traits. Analyzing a pedigree often allows determination of how a specific trait is passed down among members of a family. This analysis is useful in identifying potential

risks for future offspring and the possibility of current members of the family developing a disease in the future.
