Timing budgeting distributes positive and negative slack between blocks and then generates timing constraints in the Synopsys Design Constraints (SDC) format for block-level implementation. To generate a pre-budgeting timing analysis report file, use the check_fp_timing_environment command. To run the timing budgeter, use the allocate_fp_budgets command. Immediately after budgeting a design, you can use the check_fp_budget_result command to perform post-budget analysis. [16]
