Object-oriented programming is our introduction to data abstraction. We emphasize the concepts of a data type (a set of values and a set of operations on them) and an object (an entity that holds a data-type value) and their implementation

using Java's class mechanism. We teach students how to use, create, and design data types.

Introduction to Programming in Java

In Java, the programming language wants to know what kind of information you are going to be storing in a variable. This is because Java is a strongly typed language . I could teach you about what the difference is between a strongly typed language and a weakly typed language, but that will likely bore you right now, so let's just focus on what a type is in Java and why it's important .
