“Line Balancing” in a layout means arrangement of machine capacity to secure relatively uniform flow at capacity operation. It can also be said as “a layout which has equal operating times at the successive operations in the process as a whole”.

Line Balancing: Meaning and Methods

Line balancing is the leveling of the workload across all operations in a manufacturing line to remove any bottlenecks and excess capacity. The 'line' could be an assembly line or modular line and will likely have many work stations with varied tasks and work contents. Manufacturing throughput is dependent on the length of time each task takes on the line, the number of staff available and their skill level, machine capacity and in the case of mixed assembly lines, changeover times.
