Since the Green's function solves $\nabla^2 G(x, y) = \delta(x - y)$ and the delta function vanishes outside the point $x = y$, one method of constructing Green's functions is to instead solve the homogeneous linear differential equation $\nabla^2 G(x) = 0$.

In particular, Green's function methods are widely used in, e.g., physics, and engineering. More precisely, given a linear differential operator acting on the collection of distributions over a subset of some Euclidean space, a Green's function at the point corresponding to is any solution of (1) where δ denotes the delta function.

Using Green's Functions to Solve Nonhomogeneous ODEs

The first method simply used a Green's function developed for Helmholtz's equation $\nabla^2 u + k^2 u = f$

$= 0$ and took the limit as $k \rightarrow 0$. The second method wrote the Green's function as a sum of eigenfunctions that satisfied the boundary conditions. The coefficients were then chosen so that the correct singular behavior occurred at the source point.

GREEN'S FUNCTIONS WITH APPLICATIONS Second Edition

Solving these two equations for A and B gives the Green's function $G(x; \xi) = \frac{1}{2} \sin(1-x) \sin(1-\xi) \sin x + \theta(x-\xi) \sin(1-x) \sin \xi$ (7.19) Using this Green's function we are immediately able to write down the complete solution to $-y'' = f(x)$ with $y(0) = y(1) = 0$ as $y(x) = \int_0^1 f(\xi) \sin \xi d\xi + \sin x \int_0^1 f(\xi) \sin(1-\xi) d\xi$. The concept of a Green function is most easily illustrated by considering the dynamics of a particle initially at rest under the influence of a time-dependent force $F(t)$. One first considers a force acting for a very short time: a sharp blow or impulse. The impulse is chosen to induce a unit change in momentum at a time t .

Green's function - Wikipedia

In many-body theory, the term Green's function (or Green function) is sometimes used interchangeably with

correlation function, but refers specifically to correlators of field operators or creation and annihilation operators. The name comes from the Green's functions used to solve inhomogeneous differential equations, to which they are loosely related. (Specifically, only two-point 'Green's functions' in the case of a non-interacting system are Green's functions in the mathematical sense; the li
