In most everyday circumstances, the properties of light can be derived from the theory of classical electromagnetism, in which light is described as coupled electric and magnetic fields propagating through space as a traveling wave. However, this wave theory, developed in the mid-19th century, is not sufficient to explain the properties of light at very low intensities.

The angle, from normal, of the light is referred to as the Angle of Incidence. Reflection is the return of light after hitting a surface. The angle, from normal, of the light on its return path is the Angle of Reflection. The Law of

Reflection dictates that when light hits a smooth surface the angle of incidence is equal to the angle of reflection.
