II Basic Concepts. Space plasma physics often requires that dynamics be analyzed in terms of both the motion of individual particle and in terms of macroscopic moments such as temperature T , density n , and pressure P . Individual particle motion is based on considering the force $F = q (E + v \times B)$ acting on a particle of charge q , mass m , and moving with a velocity v in an electric field E and magnetic field B . Particle motion is generally separated

into components $v_{\parallel}$ | parallel to B and $v_{\perp}$
