Pipelining – MIPS Implementation – Computer Architecture

In computer engineering, computer architecture is a set of rules and methods that describe the functionality, organization, and implementation of computer systems. Some definitions of architecture define it as describing the capabilities and programming model of a computer but not a particular implementation. In other definitions computer architecture involves instruction set architecture design, microarchitecture design, logic design, and implementation.

Computer Architecture can be considered as an agreement between H/W and S/W people. That is, what all feature is being provided by the H/W programmer is depicted here. for e.g. "add a,b,c " is an instruction which is capable of adding two numbers. NOTE: Computer Architecture boundary is not only confined to ISA, but it move beyond. In short, what I can tell you is, as a OS coder or a Compiler coder whatever instruction you use to talk to H/W can be considered as a part of Computer Architecture.
