Animal, any of a group of multicellular eukaryotic organisms thought to have evolved independently from the unicellular eukaryotes. Animals differ from other multicellular eukaryotes, the plants and the fungi, in morphology and physiology in that animals evolved muscles, which allow them to be mobile.

Peter Ax - Wikipedia

Multicellular Animals | Those who wish for permanence in classification must pay the price of stasis - as if for- ever condemned to confound whales with fish. M. T. Ghiselin 1981, p. 283 Scientific argument is a debate concerned with the solution of unresolved problems.

Multicellular Animals by S. Kinsey; Peter Ax

Systems for classifying organisms change with new discoveries made over time. The earliest systems recognized only two kingdoms (plant and animal.) The current Three Domain System is the best organizational system we have now, but as new information is gained, a different system for classifying organisms may later be developed.

Three Domain System - ThoughtCo

Multicellular Animals illustrates that the days of “classical” traits are anything but gone. In several cases he arguably pays too little attention to genetic results. Recent advances in research on rare genomic changes, for instance, are exactly the sort of evidence morphologists like Ax should appreciate.

Invertebrate animals have a great variety of liquids, cells, and modes of circulation, though many invertebrates have what is called an open system, in which fluid passes more or less freely throughout the tissues or defined areas of tissue. All vertebrates, however, have a closed system—that is, their circulatory system transmits fluid through an intricate network of vessels.
