HARTSHORNE'S ALGEBRAIC GEOMETRY - SECTION 2.1 3 holds: for every open set $U \subset X$, and for every $s \in G(U)$, there is a covering $\{U_i\}$ of U , and there are elements $t_i \in F(U_i)$, such that $\phi(t_i) = s|_{U_i}$, for all i . Solution by Christian Martinez We know from exercise 1.2(b) that $\phi: F \rightarrow G$ is surjective if and only if $\phi_p: F_p \rightarrow G_p$ is surjective for all p . Thus, $\phi: F \rightarrow G$

Robin Hartshorne studied algebraic geometry with Oscar Zariski and David Mumford at Harvard, and with J.-P. Serre and A. Grothendieck in Paris. After receiving his Ph.D. from Princeton in 1963, Hartshorne became a Junior Fellow at Harvard, then taught there for several years. In 1972 he moved to California where he is now Professor at the University of California at Berkeley.

The empty set and the whole space are algebraic sets. $Y_1 = Z(T_1)$ and $Y_2 = Z(T_2)$, then $Y_1 \cup Y_2 = Z(T_1 T_2)$, where $T_1 T_2$ denotes the set of all products of an element of T_1 by an element of T_2 . Indeed, if $P \in Y_1 \cup Y_2$, then either $P \in Y_1$ or $P \in Y_2$, so P is a zero of every polynomial in $T_1 T_2$.

Shortly after I entered graduate school, I was advised by a number of professors to go through Chapters II and III of Hartshorne's Algebraic Geometry thoroughly, solving all the exercises within. As it turned out, there are some absurdly difficult results that are given as exercises. (Seriously, openness of the flat locus is an exercise?)

(i) If $s_1, s_2 \in F(U)$ is such that $s_1|_{V_i} = s_2|_{V_i}$ for all i , then $s_1 = s_2$. (If $C = Ab$, we can just check this for $s_2 = 0$.) (ii) Suppose we are given for each $i \in I$, an element $s_i \in F(V_i)$ such that for each $i, j \in I$, $s_i|_{V_i \cap V_j} = s_j|_{V_i \cap V_j}$. Then there exists an element $s \in F(U)$ such that $s|_{V_i} = s_i$ for each i . (The element

s is unique by (i).)

Pelham Wilson's online notes for the 'Preliminary Chapter 0' of his Part III Algebraic Geometry course from 2014 cover much of this catch-up material but are pretty brief. They do give further resources and book suggestions. Hartshorne 'Algebraic Geometry' (classic textbook although it's quite dense; the workshop (notes above) mainly tried to match terminology and notation with Chapter 1 of this book).
