Trigonometry In Engineering

Trigonometry is not just a subject to be studied in a classroom with no real world practical applications. Engineers of various types use the fundamentals of trigonometry to build structures/systems, design bridges and solve scientific problems.

Trigonometry means the study of the triangle. It is further used to find the angles of a triangle when the lengths of the sides are known, or finding the lengths of two sides when the angles and one of the side lengths are known.

TRIGONOMETRIC RATIOS The ratios of the lengths of the sides of a triangle are always the same for any given angle θ . These ratios are very important because they allow us to calculate lots of things to do with triangles. SINE If you measured all the lengths on the diagram you would find that

$$\frac{3}{3} = \frac{2}{2} = \frac{2}{2} = \frac{1}{1} = \frac{1}{1} = \frac{OA}{OA} = \frac{AB}{AB} = 1$$
