DETECTION. As opposed to classification, detection refers simply to establishing that an object is present as distinct from its background and surroundings. UAS detection methods consist of those modalities likely to discriminate a UAS from its background but not necessarily, specifically classify it apart from similar objects.

Detection and Classification of Small UAS for Threat ...

Classification of LSS UAS, especially classification in the presence of background clutter (e.g., urban environment) or other non-threatening targets (e.g., birds), is under-explored. Though information of avail- able technologies is sparse, many of the existing options for UAS detection appear to be in their infancy (when compared to more established ground-based air defense systems for larger ...

Counter UAS Operator Assist (CUAS-OA) is an intuitive user-interface that facilitates simple command and control of the entire counter UAS kill chain – detection, locating, tracking, classification, positive identification and neutralization of sUAS. CUAS-OA provides operators with live, real-time cues of aerial objects. The optic automatically slews to cue to facilitate rapid positive identification of the object.

Counter UAS (CUAS) Systems for Protection Against sUAS

The detection, identification, and neutralization of such UAS flying near key infrastructure or sensitive areas (e.g. government buildings, high-profile event locations, prisons, military compounds) has therefore become a critical capability. So far, traditional countermeasures have demonstrated their weakness in this regard.
