If an object is at equilibrium, then the forces are balanced. Balanced is the key word that is used to describe equilibrium situations. Thus, the net force is zero and the acceleration is 0 m/s/s. Objects at equilibrium must have an acceleration of 0 m/s/s. This extends from Newton's first law of motion. But having an acceleration of 0 m/s/s does not mean the object is at rest.

Equilibrium, in physics, the condition of a system when neither its state of motion nor its internal energy state tends to change with time. A simple mechanical body is said to be in equilibrium if it experiences neither linear acceleration nor angular acceleration; unless it is disturbed by an outside force, it will continue in that condition indefinitely.

A body is in equilibrium if it is in motion generally, the base of the object should lie in lowest position so that the object becomes more stable. Similarly, the area of base should also be large. Also, the vertical line passing through C.G should lie on the large area of base. Under such three conditions, the body becomes equilibrium.
