Try and Except in Python. The try except statement can handle exceptions. Exceptions may happen when you run a program. Exceptions are errors that happen during execution of the program. Python won't tell you about errors like syntax errors (grammar faults), instead it will abruptly stop. An abrupt exit is

bad for both the end user and developer.

Try and Except in Python - Python Tutorial

Try and Except. If an error is encountered, a try block code execution is stopped and transferred down to the except block. In addition to using an except block after the try block, you can also use the finally block. The code in the finally block will be executed regardless of whether an exception occurs.

Try and Except in Python - PythonForBeginners.com

In Python, exceptions can be handled using a try statement. The critical operation which can raise an exception is placed inside the try clause. The code that handles the exceptions is written in the except clause. We can thus choose what operations to perform once we have caught the exception. Here is a simple example.
