I'm trying to remove an '07 Mercury control box from the panel in which it is attached to. I've stared at it for about an hour and I am clueless. The secret appears to be to remove the throttle handle first, but I can't seem to figure out how to do it without breaking something in the process.

The throttle control is a lever that can be pressed forward to increase the speed of the boat. When the throttle level is

pushed forward, it opens the engine throttle in the outboard, which means that more air and fuel is being allowed into the combustion chamber at a higher rate of frequency. This causes the engine to run faster, which in turn delivers more spin to the propellers. A typical throttle control and shifter has one lever for each outboard installed.
