Material and energy balances are very important in chemical engineering and industry. Material balances are fundamental in the control of processing, largely in the control of yields of the products. The first material balances are determined and improved during pilot plant experiments. When any changes occur in the process, the material balances need to be determined again.

Chapter 7 - Energy and Energy Balances

Since the absorber column involves 3 species (i.e. acetone, air, and water), we can have up to 2 “independent” species balances. Hence, the total # of equations = 3 (1 overall-balance equation and 2 species-balance equation) while the # of unknowns = 3. Accordingly, the degree of freedom (DoF), which is defined as follows: $\text{DoF} = (\# \text{ of unknowns}) - (\# \text{ of equation available})$ for doing the material balances around the

absorber column is $\text{DoF} = (3) - (3) = 0$. When $\text{DoF} = 0$, we can solve for ...

A mass balance, also called a material balance, is an application of conservation of mass to the analysis of

physical systems. By accounting for material entering and leaving a system, mass flows can be identified which might have been unknown, or difficult to measure without this technique. The exact conservation law used in the analysis of the system depends on the context of the problem, but all revolve around mass conservation, i.e., that matter cannot disappear or be created ...
