Ferns and allied plants appeared 400 million years ago, around 250 million years before the flowering plants. Although ferns lack flowers and seeds, they are not primitive. Instead they spread through spores, a reproductive process shared with mosses and liverworts. The most visible parts are the spore-bearing leaves, or fronds. Fern spores are very small, so are carried long distances on the wind. They can survive for decades in the atmosphere or the soil.
