Abstract. The isolation and identification of cholesterol esterase (CE) and pancreatic lipase (PL) inhibitory peptides obtained from the protein hydrolysate of brewer's spent grain (BSG) was performed. BSG peptides were fractionated and purified sequentially by anion exchange, gel filtration (FPLC), and reversed phase high-performance liquid chromatography (RP-HPLC).

Isolation and identification of cholesterol esterase and ...

In probe-based identification, the organism’s single stranded DNA or RNA would bind to a complementary sequence and form hybrid which is double stranded. Identification of specific organisms can be done from the clinical specimen, culture, formalin-fixed or paraffin-embedded tissues . The use of rRNAs is essential for probe-based detection of species as its nucleotide sequence is well conserved within a species and varies between species.
