The relapse prevention model was first developed to understand relapse from addictive behaviours such as alcoholism and smoking (Marlatt & Gordon 1985), but has since been applied to exercise and physical activity. The model proposes that relapse may result from an individual's inability to cope with situations that pose a risk of return to the previous behaviour.

Most often, a relapse prevention plan is a written document a person creates with their treatment team and shares with their support group. The plan offers a course of action for responding to triggers and cravings. Relapse usually isn't a spur-of-the-moment event. Typically it is a three-part process, including:
