The paper considers the complexity of bilinear forms in a noncommutative ring. The dual of a computation is defined and applied to matrix multiplication and other bilinear forms. It is shown that the dual of an optimal computation gives an optimal computation for a dual problem.

An $n \times m$ by $m \times p$ matrix product is shown to be the dual of an $n \times p$ by $p \times m$ or an $m \times n$ by $n \times p$ matrix product, implying that each of the matrix products requires the same ...
