Many different methods can be used to measure standing wave ratio. The most intuitive method uses a slotted line which is a section of transmission line with an open slot which allows a probe to detect the actual voltage at various points along the line. Thus the maximum and minimum values can be compared directly.

Standing wave ratio - Wikipedia

absolute mode is to measure the ratio of the secondary output voltage to the primary excitation voltage. Now the ratio can be simplified to just the magnetic coupling coefficient according to Equation 5. Ratio $V_V / V_{Pr} = V_{Se} / V_{SN} = P_N / P_P$
