Biogeography is the study of the distribution of species and ecosystems in geographic space and through geological time. Organisms and biological communities often vary in a regular fashion along geographic gradients of latitude, elevation, isolation and habitat area. Phytogeography is the branch of biogeography that studies the distribution of plants. Zoogeography is the branch that studies distribution of animals. Mycogeography is the branch that studies distribution of fungi, such as mushroom

Biogeography - Wikipedia

Biogeography probably isn't familiar to many people as a scientific field in its

own right, perhaps because it depends so much on work done independently in both biology and geology. British biogeographers C. Barry Cox and Peter D. Moore write in their text *Biogeography: An Ecological and Evolutionary Approach*, 7th edition:
