Micro-Doppler Characteristics of Radar Targets | ScienceDirect

In the paper, the micro-Doppler effect in radar is introduced and the mathematics of micro-Doppler signatures is developed. Computer simulations are conducted and micro-Doppler features in the joint time-frequency domain are exploited. 1 Introduction Radar transmits a signal to a target, interacts with the target, and returns back to the radar.

Analysis of micro-Doppler signatures

The Doppler effect is the change in frequency of a wave in relation to an observer who is moving relative to the wave source. It is named after the Austrian physicist Christian Doppler, who described the phenomenon in 1842. A common example of Doppler shift is the change of pitch heard when a vehicle sounding a horn approaches and recedes from an observer. Compared to the emitted frequency, the received frequency is higher during the approach, identical at the instant of passing by, and lower du

Algorithms to Antenna: Modeling Micro-Doppler Effects ...

The micro-Doppler effect appears as Doppler frequency modulations in coherent laser or microwave radar systems induced by mechanical vibrations or rotations of a target or any part on the target. These Doppler modulations become a distinctive signature of a target that incorporates vibrating or rotating structures, and provides evidence of the identity of the target with movement.

IET Digital Library: Radar Micro-Doppler Signatures ...

According to the Doppler effect, we will get the following two possible cases – The frequency of the received signal will increase, when the target moves towards the direction of the Radar. The frequency of the received signal will decrease, when the target moves away from the Radar. Now, let us derive the formula for Doppler frequency.
