Beginner's Guide to Aerodynamics

An aerodynamic force is a force exerted on a body by the air (or other gas) in which the body is immersed, and is due to the relative motion between the body and the gas. There are two causes of aerodynamic force: the normal force due to the pressure on the surface of the body

3 Aerodynamics is the study of objects in motion through the air and the forces that produce or change such motion. Air is a mixture of gases composed principally of nitrogen and oxygen. An aircraft operates in the air, therefore, the properties of air that affect aircraft control and performance must be understood. Pressure – Atmospheric pressure varies with altitude.

Applied Aerodynamics for Private and Commercial Pilots

An Airfoil shaped body moved through a fluid produces an aerodynamic force. The component of this force perpendicular to the direction of motion is called lift. The component parallel to direction of motion is called drag. The lift of an airfoil is primarily the result of angle of attack and shape (in particular its chamber).
