Induction is aimed at killing leukemia in

the blood and bone marrow. Its goal is to put the cancer into remission.

Treatments used in induction therapy for childhood AML may include chemotherapy, targeted therapy, radiation therapy, stem cell transplant, or other treatments as part of a clinical trial.

Childhood leukemia - Wikipedia

For CML, which is rare in children, 5-year survival rates are less helpful, because some children may live for a long time with the leukemia without actually being cured. In the past, 5-year survival rates for CML were reported to be in the range of 60% to 80%.

Childhood Leukemia Survival Rates

Leukemia, also spelled leukaemia, is a

group of blood cancers that usually begin in the bone marrow and result in high numbers of abnormal blood cells. These blood cells are not fully developed and are called blasts or leukemia cells. Symptoms may include bleeding and bruising, fatigue, fever, and an increased risk of infections. These symptoms occur due to a lack of normal blood cells.

Leukemia - Wikipedia

Most cases of acute lymphoblastic leukaemia develop in children, teenagers and young adults. Although it is rare, acute lymphoblastic leukaemia is the most common type of leukaemia that affects children. About 85% of the cases that affect children happen in those younger than 15 (mostly between the ages of 0 and 5).
