Thermal Flying in Portugal - BANDARRA

The answer is to use the tighten-on-the-surge technique : when you feel the thermal pushing solidly, or the vario indicates the strongest lift, you should tighten the turn and dig the wing into the thermal. Most pilots don't turn tightly enough, but of course, if you only tighten up in lift you'll end up in a spiral dive !

How to Thermal Better - Expanding Knowledge

As I'm climbing in a thermal I'll have a target cruise speed in mind for when I leave. Say I'm flying a Laminar ST on a typical XC day with 2 m/s climbs, let's say my target speed is 35 mph. However, it's horribly inefficient to accelerate in sink, so pull in the bar as you roll out of the thermal and dive to your target cruise speed.

How to Thermal Better - Expanding Knowledge

Burkhard Martens wurde 1962 in Niedersachsen geboren. Nach dem Studium der Verfahrenstechnik zog er 1989 nach Süddeutschland und fing mit dem Gleitschirmfliegen an. The British Association of Radio Control Soarers was founded back in the early 1970's. BARCS has also developed over these years a considerable voice in protecting and promoting its interests, such that it is the specialist body for soaring as recognised by the BMFA and now has a considerable presence within that parent UK body. It also has a place around the table in regular discussions ...

BARCS - The British Association of Radio Control Soarers

The objective of this article is to discuss attitude and approach to improving thermal flying skills, not so much technical details covered in many other sources. It is about breaking down the elements and practicing smaller parts before trying to perfect everything at once. Hopefully I can offer a

couple of tips that have helped me.

The Path to Improvement in Thermal Soaring

This effect is caused by the differing transmission characteristics for radiation of differing wavelengths; thermal energy can become trapped within the cockpit. The temperatures in cockpits of aircraft parked on airfield ramps may be 50 to 60 degrees Fahrenheit higher than those in hangars because of the radiation of solar heating through transparent surfaces.

temperature extremes and flying

For successful thermal soaring, the day needs to be warm and without too much wind, and you should be flying in an open, flat area. Thermals are of course invisible, but a strong heat haze rising from a surface, or circling birds, can indicate the presence of thermals.
