Jones factors for animal proteins such as meat, milk and eggs are between 6.25 and 6.38; those for the vegetable proteins that supply substantial quantities of protein in cereal-/legume-based diets are generally in the range of 5.7 to 6.25. Use of the high-end factor (6.38) relative to 6.25 increases apparent protein content by 2 percent.

CHAPTER 2: METHODS OF FOOD ANALYSIS

6.2.1.2 Decomposition of Other Food Constituents Moisture loss from a sample during analysis is a function of time and temperature. Decomposition enters the picture when time is extended too much or temperature is too high. Thus, most methods for food moisture analysis involve a compromise between time and a particular temperature at which limited

Food Analysis

This system of analysis divides the food into six fractions: moisture, ash, crude protein, ether extract, crude fibre and nitrogen-free extractives. The moisture content is determined as the loss in weight that results from drying a known weight of food to constant weight at 100 degrees C.

proximate analyses The analyses included in this group, also known as Weende proximate analyses, are applied firstly to materials to be used in formulating a diet as a protein or energy source and to finished feedstuffs, as a control to check that they meet the specifications or requirements established during formulation.

3. PROXIMATE ANALYSES - Food and Agriculture Organization

Abstract. Proximate analysis is defined by H. Bennett in the Concise Chemical and Technical Dictionary as the “determination of a group of closely related components together, e. g. total protein, fat.”. It conventionally includes determinations of the amount of water, protein, fat (ether extract), ash and fiber, with nitrogen-free extract (sometimes termed Nifext) being estimated by

subtracting the sum of these five percentages from 100.

Introduction—General methods for proximate and mineral ...

The proximate composition of foods includes moisture, ash, lipid, protein, and carbohydrate contents. These food components may be of interest in the food industry for product development, quality control (QC), or regulatory purposes. Analyses used may be rapid methods for QC or more accurate but time-consuming official methods.
