Introduction to Supercritical Fluids and Their ...

A supercritical fluid is the phase of a material somewhere between a gas and a liquid, a dense gas. It happens in the area on a phase diagram where the boundaries between liquid and gas

become blurred. When a material is described as supercritical, it stops behaving as a normal liquid or gas. Increasing the temperature of a supercritical fluid cannot change it into a gas, whilst increasing the pressure doesn't result in a liquid forming — changes you would expect with normal liquids and ...

Summary. Dealing with the possibilities of supercritical gases as solvents for separation processes, this volume combines physico-chemical aspects with

chemical engineering methods. It generalizes as far as possible, and treats examples in detail. Most of the examples provide new results that should be helpful for practising scientists, engineers and students who want to make use of the techniques.

The drastic changes of thermophysical properties in the pseudo-critical region of supercritical fluids bring very big challenges to the traditional Dittus-Boelter-type heat transfer correlations. In this chapter, we will talk about the principles and applications of two kinds of heat transfer correlations of supercritical fluids: the empirical type and the semiempirical type.
