C# 7.0 allows other types to be defined in such a way that they can be returned from an async method. For instance we plan to have a `ValueTask<T>` struct type. It is built to prevent the allocation of a `Task<T>` object in cases where the result of the async operation is already available at the time of awaiting. For many async scenarios where buffering is involved for example, this can drastically reduce the number of allocations and lead to significant performance gains.
