Qualitative Chemical Analysis

Qualitative chemical analysis, branch of chemistry that deals with the identification of elements or grouping of elements present in a sample. The techniques employed in qualitative analysis vary in complexity, depending on the nature of the sample. In some cases it is necessary only to verify the presence of certain elements or groups for which specific tests applicable directly to the sample (e.g., flame tests, spot tests) may be available.

Qualitative chemical analysis | chemistry | Britannica

Qualitative analysis involves chemical tests, such as the Kastle-Meyer test for blood or the iodine test for starch. Another common qualitative test, used in inorganic chemical analysis, is the flame test . Qualitative analysis typically measures changes in color, melting point, odor, reactivity, radioactivity, boiling point, bubble production, and precipitation.

Definition of Qualitative Analysis in Chemistry

Qualitative analysis means identification of target analyte (s) according to their chemical characteristics, such as spectrum. Nowadays, there is an increasing interest in identification of chemical composition of complex samples by their chemical signals that is called chemical fingerprints.

Qualitative Analysis - an overview | ScienceDirect Topics

Qualitative Analysis is the determination of non-numerical information about a chemical species, a reaction, etc. Examples would be observing that a reaction is creating gas that is bubbling out of solution or observing that a reaction results in a color change.

Qualitative Analysis - Chemistry LibreTexts

Qualitative Analysis Uses: To test the purity of water, milk, and solvents To identify the components within an unknown substance. To check the self-life and half-life of drugs. In the diagnosis of the diseases.

Qualitative analysis: 4 Methods and Uses in Chemistry

In the qualitative analysis procedure, the chemical properties of an unknown substance are determined by systematically reacting the unknown with a number of different reagents. By predetermining what the particular reaction will produce if a specific ion is present, the ions that actually are in the solution can be identified.
