A source of light makes light. The Sun and other stars, fires, torches and lamps all make their own light and so are examples of sources of light. Some animals, such as fireflies and glow-worms,...

What is light? - BBC Bitesize

Light from the Sun warms the Earth, drives global weather patterns, and initiates the life-sustaining process of photosynthesis. On the grandest scale, light's interactions with matter have

helped shape the structure of the universe. Indeed, light provides a window on the universe, from cosmological to atomic scales. Almost all of the information about the rest of the universe reaches Earth in the form of electromagnetic radiation.

light | Definition, Properties, Physics, Characteristics ...

Energy-saving light bulbs that use fluorescence are more energy efficient because they make atoms crash about and collide, making lots of light without making heat. In effect, they make cold light rather than the hot light produced by older-style, energy-wasting bulbs. Creatures like fireflies make their light through a chemical process using a substance called luciferin. The broad

name for the various different ways of making light by exciting the atoms inside things is luminescence.

Light science for kids - A simple introduction to optics

For example, fireflies use light to locate mates, and vampire squids use it to hide themselves from prey. The primary properties of visible light are intensity , propagation direction, frequency or wavelength spectrum , and polarization , while its speed in a vacuum , 299,792,458 meters per second, is one of the fundamental constants of nature.

Light - Wikipedia

It wiggles a luminous lure to attract its prey. The viperfish uses bioluminescent lights in its open mouth to entice prey

directly into its stomach. The black dragonfish produces red light from a spot just beneath its eye. This allows the dragonfish to see its prey, but the prey cannot see the red light. Non-luminous objects
