The open cycle gas turbine plant is sensitive to changes in the atmospheric air temperature, pressure and humidity. The open cycle plant has high air rate compared to the closed cycle plants, therefore, it results in increased loss of heat in the exhaust gases and large diameter duct work is needed.

Open Cycle Gas Turbine -working , Diagram ,Advantages

The open cycle gas turbine operates on the principle of drawing the fresh atmospheric air at ambient conditions into the compressor where the air is compressed by a centrifugal or an axial flow compressor [21]. The compressor will raise the temperature and pressure of the atmospheric air to the levels specified by the original equipment manufacturer (OEM).
