As discussed in Lesson 4, standing wave patterns are wave patterns produced in

a medium when two waves of identical frequencies interfere in such a manner to produce points along the medium that always appear to be standing still. Such standing wave patterns are produced within the medium when it is vibrated at certain frequencies. Each frequency is associated with a different standing wave pattern. These frequencies and their associated wave patterns are referred to as harmonics. A careful ...

Lesson Standing Waves | BetterLesson

A standing wave pattern is a regular and repeating vibrational pattern established within a medium; it is always characterized by the presence of nodes and antinodes. An antinode on a standing wave pattern is a point which is stationary; it does not undergo any displacement from its rest position. For every node on a standing wave pattern, there is a corresponding antinode; there are always the same number of each.

Standing wave, also called stationary wave, combination of two waves moving in opposite directions, each having the same amplitude and frequency. The phenomenon is the result of interference; that is, when waves are

superimposed, their energies are either added together or canceled out.

Today, the goal of the lesson is to expand students' understanding of standing waves to include the standing wave definitions and equations (HS-PS4-1 & SP5). The lesson starts when students actively take notes, which they then apply while using a simulation to create standing waves . Class ends with an analogy prompt closure activity.
