Starting Out with C++

Brief Version Update, Visual C++ .NET *Addison-Wesley Longman*

In *Starting Out With C++*, Gaddis makes a very detailed and slow-paced presentation of both programming and C++ syntax concepts so all readers will be able to follow along. Objects are introduced after control structures, functions, arrays, and pointers, and C-style strings are used throughout. The book includes the hallmark pedagogical features that readers of Gaddis books

have come to expect.

Starting Out with Programming Logic and Design *Addison-Wesley Longman*

Starting Out with Programming Logic and Design, Third Edition, is a language-independent introductory programming book that orients students to programming concepts and logic without assuming any previous programming experience. In the successful, accessible style of Tony Gaddis' best-selling texts, useful examples and detail-oriented explanations allow students to become comfortable with fundamental concepts and logical thought processes used in programming without the complication of language syntax. Students gain confidence in their program design skills

to transition into more comprehensive programming courses. The book is ideal for a programming logic course taught as a precursor to a language-specific introductory programming course, or for the first part of an introductory programming course.
