The time it takes for half of the remaining pennies to be removed is called the half-life. The half-life of the pennies in this model is about one toss. If you're using painted wooden cubes, the probability that a cube will land red side up is $1/6$. (Each cube has six sides, and only one of those sides is painted red.) It takes three tosses for about half the cubes to be removed, so the half-life of the cubes is about three tosses.
