The determinant of a matrix: a number which is calculated from the matrix. For determinant to exist, matrix A must be a square matrix. The determinant of a

matrix is denoted by $\det A$ or $|A|$. Minor and cofactor of an element in a matrix/determinant: Minor of any element where i is the number of rows, j is the number of columns, is the det of matrix left over after deleting the i th row and j th column.

 Determinants and Matrices.

Determinants and matrices, in linear algebra, are used to solve linear equations by applying Cramer's rule to a set of non-homogeneous equations which are in linear form. Determinants are calculated for square matrices only. If the determinant of a matrix is zero, it is called a singular determinant and if it is one, then it is known as unimodular.
