Ontologies and soft computing in flexible querying * by - CORE

Soft ontology, as proposed in computer science circles by Aviles et al. (2003), is a definition of a domain in terms of a flexible set of ontological dimensions. It

can be regarded as a subclass of ontologies as they are conceived of in computer science, in Gruber's terms (1993) as definitions of conceptualization.

Soft ontology - Wikipedia

The ontology offers better manner to represent the information and records as it is primarily based on the conceptualization, This makes use of some soft computing strategies like Fuzzy set, Genetic Algorithms, Particle Swarm Optimization and other probabilistic strategies despite the fact that it improves the performance of representing and examining the ontology below numerous categories.

However, Semantic Web ontologies are based on crisp logic and do not provide well-defined means for expressing uncertainty. We present a new probabilistic method to approach the problem.
