The mathematical model for joint stochastic short-term production scheduling and fleet management optimization for mining complexes is formulated as a stochastic integer programming model with fixed recourse (Birge and Louveaux 2011), and builds upon the simultaneous stochastic optimization of the components of a mining complex that are pertinent to long-term mine planning (Goodfellow 2014; Goodfellow and Dimitrakopoulos 2016, 2017). In this section, a general notation and objective function ...

Short-term mine production scheduling is formulated as a stochastic integer programming model with recourse (Birge & Louveaux, 1997) and aims to minimize the total mining cost along with deviations from production targets, considers operational aspects such as mining direction and minimum width, and maximizes fleet utilization. In the formulation presented herein, the first-stage decisions are made before the uncertainty is revealed, then the second-stage decisions or recourse actions are ...
