The Geology Of Mars

The geology of Mars is the scientific study of the surface, crust, and interior of the planet Mars. It emphasizes the composition, structure, history, and physical processes that shape the planet. It is analogous to the field of terrestrial geology.

Geology of Mars - Wikipedia

The lowland plains of Mars look very much like the lunar maria, and they have about the same density of impact craters. Like the lunar maria, they probably formed between 3 and 4 billion years ago. Apparently, Mars experienced extensive volcanic activity at about the same time the Moon did, producing similar basaltic lavas.

Surface geology. Mars is a terrestrial planet that consists of minerals containing silicon and oxygen, metals, and other elements that typically make up rock. The surface of Mars is primarily composed of tholeiitic basalt, although parts are more silica-rich than typical basalt and may be similar to andesitic rocks on Earth or silica glass. Regions of low albedo show concentrations of plagioclase feldspar, with northern low albedo regions displaying higher than normal concentrations

The geology of Mars: new insights and outstanding questions

Mars is a terrestrial planet with a thin atmosphere, having surface features similar to both of the impact craters of the Moon and the volcanoes, valleys, deserts, and polar ice caps of Earth. It is home to the highest mountain of our solar system: Olympus Mons and the largest known canyon: Valles Marineris.

Geology of Mars - SlideShare

On this basis, the surface of Mars is often divided into three major physiographic provinces, each with different geological and tectonic

characteristics: the northern plains, the southern highlands, and the Tharsis plateau. Much tectonic study of Mars seeks to explain the processes that led to the planet's division into these three provinces, and how their differing characteristics arose.

Tectonics of Mars - Wikipedia

These questions will be addressed by studying Mars' geology. As part of the Mars Exploration Program, we want to understand how the relative roles of wind, water, volcanism, tectonics, cratering and other processes have acted to form and modify the Martian surface. For example, Mars is home to incredibly large volcanoes, which can be 10 to 100 times

larger than those on Earth.
