In mathematics and science, a nonlinear system is a system in which the change of the output is not

proportional to the change of the input. Nonlinear problems are of interest to engineers, biologists, physicists, mathematicians, and many other scientists because most systems are inherently nonlinear in nature. Dynamical Systems Definition | Nasdaq

A dynamical system is a manifold M called the phase (or state) space endowed with a family of smooth evolution functions Φ_t that for any element of $t \in T$, the time, map a point of the phase space back into the phase space. The notion of

smoothness changes with applications and the type of manifold. There are several choices for the set T . When T is taken to be the reals, the dynamical ...
