Lewis structures show the valence, or outer shell, electrons that are used to form bonds in a molecule or polyatomic ion. A single bondconsists of one pair of electrons that is shared between two atoms. Two shared pairs of electrons form a double bond, and three shared pairs form a triple bond.

MOLECULAR MODELS OBJECTIVES INTRODUCTION

Lewis structures are diagrams in which dots show the valance electron position around the atoms that make up the molecule. The structures show the bonding between atoms and the number of lone pairs in the central atom. Drawing a Lewis structure makes it easy to predict the electronic geometry, molecular geometry, polarity, bond angles, and central atom hybridization. In order to draw Lewis structures of molecules, one must follow certain rules.
