July 30, 2019. An analysis of over a century of reported shark attack data shows that attacks are on the rise. But it also offers some hints at the reason why: increasing human influence and interference in the oceans. Reported shark attacks since 1970. Shark attacks are on the rise in general, and provoked attacks — incidents in which a shark was confronted with some sort of human interference — are on the rise as well.

Overview. Recent advances in satellite tagging and tracking are allowing scientists to “spy” into the secret lives of marine animals. We are currently using satellite tags to track the movements of shark species in the subtropical Atlantic. The goal of this work is to understand the migratory routes and residency patterns of these sharks to identify “hot spots” in place and time that are critical for mating, giving birth and feeding as well as locations where these animals are ...
