Microarray Image and Data Analysis: Theory and Practice ...

A DNA microarray is a collection of microscopic DNA spots attached to a solid

surface. Scientists use DNA microarrays to measure the expression levels of large numbers of genes simultaneously or to genotype multiple regions of a genome. Each DNA spot contains picomoles of a specific DNA sequence, known as probes. These can be a short section of a gene or other DNA element that are used to hybridize a cDNA or cRNA sample under high-stringency conditions. Probe-target hybridization is usually detected

The data generated through the microarray technology are gathered and saved in a computer with the help of an image scanner. As these data

are found in large amounts, it is difficult even for statistical experts to perform the analysis using traditional methods.
