Abdominal Wall Hernias: Principles and Management - Google ...

About abdominal hernia. Your tummy wall is made up of sheets of tough muscles and tendons that run between your ribs and groin. If part of this wall gets weaker, whatever's on the inside can push through, causing an abdominal hernia. Your hernia may not cause any symptoms or you may notice discomfort or a bulge in your tummy or groin.

A hernia occurs when an organ protrudes through the wall of muscle that encircles it. There are several different types of hernias that can occur in the abdominal and surrounding areas. These include umbilical hernias, epigastric hernias, incisional hernias, and others. For more information on these specific types of hernias, including symptoms and treatment methods, see below.

Abdominal Wall Hernias | Michigan Medicine

This concept arose from the fact that all of these hernias, which classically are divided into direct, indirect and femoral hernias, are caused by damage to the

transversalis fascia layer in the area of the myopectineal orifice. This region is known to be weak anatomically. The debate continues, and has recently become more active.

Hernia of the Abdominal Wall | SpringerLink

A hernia occurs when an internal part of the body pushes through a weakness in the muscle or surrounding tissue wall. A hernia usually develops between your chest and hips. In many cases, it causes no or very few symptoms, although you may notice a swelling or lump in your tummy (abdomen) or groin.
