**Modern
Classification
Answer Key**

Modern evolutionary classification uses a method called cladistic analysis to determine how clades are related to one another. This information is used to link clades together into a cladogram, which illustrates how groups of organisms are related to one another by showing how evolutionary lines, or lineages, branched off from common ancestors.

Section 2 Modern Evolutionary Classification

Answer Key

There are two main classifications of elements. More than three-fourths of the elements in the periodic table are nonmetals. Group IA elements (except for

hydrogen) are known as the alkali metals. Group 3A elements are the alkaline earth metals. Group 7 A elements are highly reactive nonmetals known as halogens.

Livingston Public Schools / LPS Homepage

Introduction: Cladistics is one of the newest trends in the modern classification of organisms. This method shows the relationship between different organisms based on the presence or absence of certain characteristics called "derived characters". Derived characters are the unique characteristics of a particular group of organisms.
