Gene Expression and Regulation Test Online Mcqs. Gene expression is the process by which information from a gene is used in the synthesis of a functional gene product. These products are often proteins, but in non-protein coding genes such as transfer RNA or small nuclear RNA genes, the product is a functional RNA. Most mechanisms that control gene expression do so by controlling transcription, the synthesis of RNA.

Gene expression is the process by which the genetic code – the nucleotide sequence – of a gene is used to direct protein synthesis and produce the structures of the cell. Genes that code for amino acid sequences are known as 'structural genes'. Gene control regions: A promoter. A region a few hundred nucleotides 'upstream' of the gene (toward the 5' end).
